Quick Guide
Post-Study Outcomes App

This app provides national, regional and TEO-level data about outcomes for graduates by subject area, level of study, age, ethnicity, and gender. Where graduates are in employment, the app contains data about their earnings.

Examples of what you can discover

- National outcomes by NZSCED and learner demographics.
- TEO level outcomes by NZSCED.
- NZSCED outcomes by TEO.
- TEO level outcomes by learner demographics.
- Regional outcomes by NZSCED and learner demographics.

Things to note

- The app shows outcomes for younger and older learners. For younger learners it is more meaningful to look at employment, further study and job seeker outcomes. But for older learners it is more meaningful to look at moving into employment, moving off benefit and change in median income.
- National outcomes include all graduates.
- Regional outcomes exclude graduates who in the outcome year have the status Overseas.
- In the last data sheet you can view the data in a table format and extract the underlying data from the app. You can use filters to limit the data in the table to desired cohort, NZSCED and TEO selections.
- To ensure a reasonable level of statistical robustness the data includes only groups of 20 or more graduates.
- TEO level data includes SAC-funded TEOs and ITOs. Due to the minimum data set size some TEOs are not reported or only partially reported.
- The highest and latest qualification completed by a person by outcome year is based on SDR data, Industry Training data and NZQA reported data.
- Learners who were in receipt of some other benefits other than Jobseeker support or in corrections for any period within the outcome year are excluded from the data.
- In accordance with Statistics NZ rules, the following groups are suppressed: outcome data where the number of graduates is less than 5 (including 0), median income data where groups of employed graduates is less than 20, and quartile income data where groups of employed graduates is less than 10.
- Graduate outcome measures are not mutually exclusive and the total sum of all outcome measures almost always exceeds 100%.
- Cohort sizes and the sum of subgroups may not add up to the total of the group, because of random rounding as specified by Stats NZ rules; the removal of statistically unreliable data where the subgroups are below 20; and the application of rounding to the nearest 10 of the cohort size.

Post-Study Outcomes sheets

- National outcomes by NZSCED
- TEO outcomes by NZSCED
- NZSCED outcomes by TEO
- Learner outcomes by TEO
- NZSCED outcomes by region
- Regional outcomes by NZSCED

Data Definitions

Take a look at the data definitions sheet in the app for more information on the following fields:

- Age group
- Cohort size
- Ethnic group
- First quartile employed income 2 years prior to qualification completion; Median employed income 2 years prior to qualification completion; Third quartile employed income 2 years prior to qualification completion
- First quartile employed income; Median employed income; Third quartile employed income

- Gender
- Graduation level
- NZSCED
- Outcome - Employed
- Outcome - Full-time study
- Outcome - Higher study
- Outcome - Jobseeker
- Outcome - Moved into employment
- Outcome - Moved off benefit

- Outcome - Non-higher study
- Outcome - Other
- Outcome - Overseas
- Outcome year
- Region
- School attainment
- TEO
- TEO type
